a flexible emboli capturing device mounted proximate the distal end, the expandable emboli capturing device forming a distally disposed emboli collection portion with a proximally opening mouth; and

a frame disposed on the mouth of the flexible emboli capturing device and connected to the elongate member.

- 32. (New) The emboli capturing system of claim 31, wherein the frame is slideably disposed about the elongate member.
- 33. (New) The emboli capturing system of claim 31, wherein the frame is attached to the elongate member proximal of where the flexible member is attached.
- 34. (New) The emboli capturing system of claim 31, wherein the frame includes a flexible material.
- 35. (New) The emboli capturing system of claim 31, wherein the frame includes a shape memory alloy.
- 36. (New) The embolicapturing system of claim 31 wherein the frame includes a continuous loop.
